

## Type 2551 Magmeter Flow Sensor

Available in a variety of wetted materials and ideal for pipe sizes up to DN900 (36. in.)

### Product description

The type 2551 Magmeter is an insertion style magnetic flow sensor that features no moving parts. The patented\* sensor design is available in corrosionresistant materials to provide long-term reliability with minimal maintenance costs. Material options include PP with stainless steel, PVDF with Hastelloy-C, or PVDF with Titanium. Utilizing the comprehensive line of GF installation fittings, sensor alignment and insertion depth is automatic. These versatile, simple-to-install sensors deliver accurate flow measurement over a wide dynamic range in pipe sizes ranging from DN15 to DN900 (½ to 36 in.), satisfying the requirements of many diverse applications.

Type 2551 Magmeters offer many output options of frequency/digital (S<sup>3</sup>L) or 4 to 20 mA which are available on both the blind and display versions. The frequency or digital (S<sup>3</sup>L) sensor output can be used with GF's extensive line of flow instruments while the 4 to 20 mA output can be used for a direct input to PLCs, chart recorders, etc. Both the 4 to 20 mA output and digital (S<sup>3</sup>L) sensor interface is available for long distance signal transmission. An additional benefit is the empty pipe detection which features a zero flow output when the sensors are not completely wetted. Also, the frequency output is bi-directional while the 4 to 20 mA output can be set for uni- or bi-directional flow using the display or the 3-0252 Configuration Tool which connects to PCs for programming capabilities.

In addition the display version of the 2551 Magmeter is available with relays and features permanent and resettable totalizer values which can be stored and seen on the display. Also, the display contains multilanguages with English, Spanish, German, French, Italian and Portuguese menu options.

Application Tips

- Note minimum process liquid conductivity requirement is 20 µs/cm.
- Install sensor using standard GF installation fittings for best results.
- Sensor is capable of retrofitting into existing 515 and 2536 fittings

Pressure-temperature diagram

Note

The pressure-temperature diagrams are specifically for the GF sensor. During system design the specifications of all components must be considered. In the case of a metal piping system, a plastic sensor will reduce the system specification. When using a PVDF sensor in a PVC piping system, the fitting will reduce the system specification.

## Wiring Information

### Loop Wiring

The 2551-XX-12 Magmeter is a traditional 2-wire passive 4 to 20 mA loop transmitter. External loop power (24 VDC  $\pm$ 10% regulated) is required.

**⚠** The maximum loop resistance the Magmeter can accommodate is 300  $\Omega$ .

All 2551-XX-12 Magmeters are shipped from the factory with the 4 to 20 mA output scaled for 0 to 5 m/s (0 to 16.4 ft/s). If this operating range is suitable, no adjustments are necessary.

The 3-0252 Configuration Tool is required to change the operating range.

### Frequency Wiring

- When the blue jumper illustrated here is placed over both pins, the 2551-XX-11 outputs an open collector frequency signal that can be connected to any powered GF flow meter. (Types 9900, 9900-1BC, 9950).
- 5 VDC power is provided to the 2551 Magmeter by all GF flow instruments. No additional power is required.
- If connecting the 2551 Magmeter to a flow instrument from another manufacturer, 5 to 24 VDC  $\pm$ 10% regulated power must be provided to the 2551.
- A 10 K $\Omega$  pull up resistor must also be connected between terminals 1 and 2.
- The frequency output will be displayed as positive flow regardless of the flow direction.

### 2551 Frequency Out

### Digital (S<sup>3</sup>L) Wiring:

- When the blue jumper illustrated here is removed (or placed over one pin for storage) the 2551-XX-11 outputs a digital (S<sup>3</sup>L) signal compatible with the type 9900 or 9950.
- The 2551 receives 5 VDC power from the 9900 or 9950. No additional power is required.
- The 9900 or 9950 will display negative flow rate during periods of reverse flow.
- The maximum cable length from the 2551 to the 9900 or 9950 is 1000 ft.
