## General KF 0

### I Construction

#### Gear pump with single radial lip-type seal

- 1 Housing
- 2 Flange cover
- 3 Cover plate
- 4 Gearing
- 5 Bearing bush
- 6 Single radial lip-type seal

#### Gear pump with double radial lip-type seal and threaded connection for quench

- 1 Housing
- 2 Flange cover
- 3 Cover plate
- 4 Gearing
- 5 Bearing bush
- 6 Double radial lip-type seal
- 7 Connection for quench

### I Description

In numerous technical processes dosing liquids is the focus of the task. PUR components, softeners, resins, lacquers, paints are just some of the most important liquids with a broad application range.

The accuracy, evenness and reproducibility with which these products can be processed are also decisive for the quality of the final product.

The gear pump size KF 0 is especially suitable for these applications. The KF 0 is an external gear pump with flow rates of 0.5 ... 4 cm<sup>3</sup>/rev.

The grading of the total of eight nominal sizes makes it easier to set the desired dosing ratios. The fine gearing with a high number of teeth guarantees a low-pulsation volume flow.

All gear parts and the bearing bushes are protected even in the standard design by a special coating against wear and corrosion, so that even filled media up to a specific grain size and hardness of the filled material can be conveyed. Because of the backlash dimensioning in combination with precise production the KF 0 has very good volumetric efficiency over a wide pressure range.

Various types of seals, such as single radial lip-type seals and double radial lip-type seals can be selected depending on the task, whereby the latter version enables operations with quench (quench chamber) to prevent the pumping medium from hardening or crystallising.

In combination with a flow meter and the electronics the KF 0 can be extended to a highly precise dosing unit.

## Technical data

### General characteristics

Fixing type	Flange
Hydraulic connection	Pipe thread
Speed	... 3000 1/min (Dependent on viscosity)
Direction of rotation	Clockwise or anticlockwise
Mounting position	<b>100</b> optional <b>107</b> horizontal <b>212</b> optional
Dimensions	Pages 8 ... 10
Weight	2.2 kg

### Hydraulic characteristics

Displacement in cm <sup>3</sup> /rev	0.5 · 0.8 · 1.0 · 1.6 · 2.0 · 2.5 · 3.0 · 4.0
Working pressure inlet port min max	-0.4 bar (-0.6 bar short for starting status) 2 bar
Working pressure outlet port max	120 bar (Depending on the pumping medium, viscosity and displacement)
Ambient temperature	-20 ... 60°C
Media temperature max	NBR 90 °C FKM 150 °C PTFE 200 °C
Viscosity	10 ... 20.000 mm <sup>2</sup> /s

### Available pump types

Special numbers	100 (Standard)	107	212
Available sizes	0.5 · 0.8 · 1.0 · 1.6 · 2.0 · 2.5 · 3.0 · 4.0	0.5 · 0.8 · 1.0 · 1.6 · 2.0 · 2.5 · 3.0 · 4.0	0.5 · 1.0 · 2.0 · 4.0
Housing material	EN-GJL-250	EN-GJL-250	EN-GJS-600 nitro carbonized
Flange cover material	EN-GJL-250	EN-GJL-250	EN-GJS-600 tenifer nitrided
Bearing	Bearing bush	Bearing bush	Bearing bush
Bearing material	Steel ETG 100 chemically nickel plated with SiC inclusions	Steel ETG 100 chemically nickel plated with SiC inclusions	Steel ETG 100 chemically nickel plated with SiC inclusions

Shaft seal	Single radial lip-type seal	Double radial lip-type seal	Double radial lip-type seal
Shaft seal material	NBR, FKM, PTFE	NBR, FKM, PTFE	NBR, FEP
Free of non-ferrous metals	yes	yes	yes

### Maximum permissible working pressure depending on the viscosity

Nominal size	10 mm <sup>2</sup> /s	30 mm <sup>2</sup> /s	100 mm <sup>2</sup> /s	> 500 mm <sup>2</sup> /s
	Permissible working pressure in bar			
0.5	10	30	50	60
0.8	15	40	60	70
1.0	15	40	60	70
1.6	20	60	80	100
2.0	20	60	80	100
2.5	30	60	100	120
3.0	30	60	100	120
4.0	40	80	120	120

The values are valid for the speed range 1000 ... 3000 1/min. Then max. working pressures must be reduced for speeds < 1000 1/min

## Discharge flow and required drive power

## General – KF 0 with magnetic coupling

### Construction

- 1 Pump
- 2 Adapter
- 3 Bell housing
- 4 Outer rotor
- 5 Split case
- 6 Inner rotor

### Description

With various applications conventional seals come up against their limits. Typical applications can be found in PUR plants, refrigerating installations and vacuum plant. It is possible to fit the KF 0 with a magnetic coupling for these applications.

The magnetic coupling serves as a shaft seal and to transmit the torque. The outer rotor of the magnetic coupling is placed on the motor shaft and the inner rotor directly on the pump shaft. The torque is transmitted between the outer and inner rotors through the magnetic forces.

The split case, which seals the pump hermetically, is located between the two rotors.

The magnetic coupling is used if an absolutely tight seal is required between the pump chamber and the atmosphere, e. g. for dosing isocyanate, where contact with the air would lead to an undesired hardening of the medium. It can be used in vacuum operations, e.g. filling brake liquid, and reliably prevents air penetrating into the system.

Non-leak operations are also guaranteed when used in sealed systems with a high admission pressure on the pump suction side.

The magnetic coupling is predestined for dosing hazardous and harmful media.

## Technical data

### I General characteristics

Fixing typ	Flange
Hydraulic connection	Pipe thread
Speed	... 3000 1/min (Dependent on viscosity)

### I Selection assistance

Pump	Coupling size	Permitted power in kW at 750 min <sup>-1</sup>	Motor size	Permitted power in kW at 1000 min <sup>-1</sup>	Motor size	Permitted power in kW at 1500 min <sup>-1</sup>	Motor size	Permitted power in kW at 3000 min <sup>-1</sup>	Motor size
KF 0	MSA 46	0.12	71	0.18	71	0.12	63	0.25	63
		-	-	-	-	0.18	63	0.37	71
		-	-	-	-	0.25	71	0.55	71
	MSA 60	0.18	80	0.25	71	0.37	71	0.75	80
		0.25	80	0.37	80	0.55	80	1.10	80
	MSB 60	0.37	90	0.55	80	0.75	80	1.50	90
		0.55	90	0.75	90	1.10	90	2.20	90

The values stated in the table refer to a maximum media temperature of 80 °C.

At media temperatures > 80 °C are to be selected if necessary stronger magnetic couplings.

### To design the magnetic coupling, the following information needs to be available:

- Pump size
- Pump pressure (working and starting pressure)
- Working and starting viscosity
- Precise name of media, required static seals (if possible), possibly main media characteristics
- Drive motor power
- Speed or speed range
- Switch on type – direct or with frequency inverter
- Media and ambient temperature
