

JOWA - FWU FRESH WATER UNIT

FRESH WATER TREATMENT SYSTEMS

“MADE FOR MARINE”

CUSTOM-MADE UNIT FOR WATER HANDLING

JOWA Fresh Water Units are specially designed for the offshore and marine market. They consist of all necessary equipment for fresh and hot water supply, such as:

- » Calorifiers
- » Hydrophores
- » Filters for various applications
- » Pumps for pressurizing and hot water circulation
- » UV-sterilizer, silver ion sterilizer or chlorination
- » Control cabinet

Our engineers design a customer-made unit according to customers, specifications, combined with our knowledge and experience.

Before our production starts customer will get complete drawings of the unit with locations and dimensions of all connections.

All equipment is mounted on a common frame with all internal piping and electrical work completed.

Each unit, before leaving our workshop, will pass a quality-test of all functions. The unit is also pressure tested. The only thing left for the customer to do before using the equipment is to connect water inlet and outlets and electrical power supply. Quick and easy installation onboard.

All equipment are of the highest quality. Our calorifiers and hydrophores are made of stainless steel 316L. Pumps are selected from well known brands on the worldwide market. Sterilizers, filters, calorifiers and hydrophores are our own products and design so that spare parts are easily available from anyone of our offices or representatives worldwide.

Main Features

- » Easy to install
- » Compact and flexible design
- » Quick response as all units are from one supplier
